## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-8, drawn to collar with clamp and hose fitting, classified in class
   285, subclass 238+.
- II. Claims 9-25, drawn to sampling method and apparatus including collar, hose, canister, vacuum source and tubing, classified in class 73, subclass 863.21+.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a hose fitting. The hose may be attached to collar by some other means such as by bonding or hose clamp. The subcombination has separate utility such as hose adapter in fluid transport system.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
